Presentation

Critical thinking, creative thinking, and complex problem solving will be some of the most sought-after skills by companies in 2022, according to the World Economic Forum. These skills are essential for any business executive, public manager, or professional who has to make decisions in an environment dominated by uncertainty.

Acquiring the ability to accurately assess problems, weigh potential solutions, and anticipate inherent risks will be what distinguishes present and future professionals.

But what exactly is problem solving?

It is a methodology that involves using generic or tailored formulas in an orderly manner to find effective solutions to problems. It is relatively common for one of the main obstacles when solving a problem to stem from mental frameworks that hinder proper approach and resolution. Applying a good process in problem solving can make a difference in terms of speed and effectiveness. The opposite can lead to ineffective solutions, often generating significant frustration.

Having the ability to solve problems can make a substantial difference in your professional career. Critical thinking, the application of scientific methods, and

logical reasoning to problems and decisions form the basis of effective problem solving and decision-making. Knowing new approaches to problem solving has become a competitive advantage for achieving positions of responsibility in the professional world.

Why does UNIR recommend this program?

- You will learn to detect fallacies, biases, and cognitive prejudices that hinder problem solving.
- You will discover how to successfully apply individual problem-solving techniques.
- You will identify the key aspects for working on problems in a team.
- You will learn the most widespread problem-solving methodologies: theory and practice.
- You will discover through critical thinking how to conduct an accurate analysis of reality that allows you to choose the best solutions.
- You will learn the best individual and group techniques to channel knowledge and creativity.
- You will learn how to use storytelling to communicate proposals and solutions to your teams in a comprehensible and motivating way.

TARGET AUDIENCE

- Managers, executives, and strategy leaders in the public and private sectors.
- Area leaders: marketing, HR, communication, innovation, digital, technology, operations, and finance.
- Project managers, team leaders, and team supervisors.
- Professionals in the social field: coaches, psychologists, educators, therapists, social workers, and social educators.
- Any professional looking to improve their cognitive skills.

Key Data

- **Duration:** 5 months
- **Live online sessions:** Twice a week.
- **Four master sessions:** Where you will discover the experiences of other experts in Complex Problem Solving.

- **Mandatory activities:** To complete the program, students must:
- Take tests.
- Complete a group practical case study.
- **Recognition of 6 ECTS in undergraduate studies.**

Why choose us?

We provide everything you need to enhance your professional career without the need to travel; you only require an internet connection and a device (PC, tablet, or mobile) to follow the program.

With our pedagogical model, you will participate in live online classes taught by the best professionals from around the world. Additionally, you can watch them at any time and from anywhere, making it ideal for balancing with your personal and professional schedule.

We promote NETWORKING, which is key to your professional development, by connecting you with high-level speakers and participants.
